NodeQuiz Deployment Guide

Heroku Pipeline

- Sign in to Heroku
- Select "New" from the top-right corner of the screen
- Select "Create new app"
  - Name your application <yourlastname>-nodequiz
- Navigate to the "Deploy" tab
- Under "Deployment method" select "GitHub"
- Sign in to your GitHub account and "Authorize" Heroku
- Under "Connect to GitHub" enter your repositories name and select "Search"
- Select "Connect"
- Scroll down to "Enable Automatic Deploys" and select it
  - Now every time you update your repository and push the code to GitHub, Heroku will automatically deploy the changes
- Review server logs for progress/errors

Manual Deployments

- Navigate to the "Deploy" tab
- Under "Manual deploy" select the "Deploy Branch" button
- Review server logs for progress/errors
